## 1. Product content / compliance

- 10% Humic acids
- 5% Fulvic acids
- 10% Amino acids of vegetal origin

## 2. Physical/chemical properties

**GERMINOSEED** comes in liquid form, has a brown color, with a specific smell.

## 3. Action mode / Description

**GERMINOSEED** is a biodynamic product, obtained by a process of rapid cold fermentation of organic matter and its mixing with NON-GMO organic and mineral substances that complies with the requirements of Regulation 889/2008, Annexes I and II.

GERMINOSEED rushes the germination of the seeds and contributes to the healthy development of the plants. It is a 100% organic product, highly appreciated by the farmers carrying out organic agriculture in Romania.

Based on organic amino acids from vegetal source (L-amino acids), GERMINOSEED helps the seeds to germinate faster and also helps the plants to have a healthy and strong development until the two leaf stage (in the case of weeding crops), respectively up to 2-3 cm for the rest of the crops.

The germination process is a complex physiological process through which the embryo of the plant, found inside the seed, starts growing after a period of inactivity. The treatment with GERMINOSEED is recommended in order to help the seed have at its disposal the nutritional elements necessary for a better germination.

## 4. Recommended dosage

From practical experience and / or available documentation, we recommend the following application dosage:

### WHEAT / BARLEY / TRITICALE

2L / ton mixed with FREYA SEED TS

### ALL OTHER CROPS

10L / ton mixed with FREYA SEED TS
