

RAZZER

Contains: Neem oil (Margosa extract) 4%, orange oil 0.6%, paraffin oil (white mineral oil) 4%

Biostimulant with a protective role against insects

Product for foliar application

Formulation: soluble concentrate

The product can be used in organic farming according to Regulation (EC) 848/2018

Hazard statements

Not applicable

Precautionary statements

P501 – Dispose of contents/container in accordance with national/international regulations

e 500 ml

Batch. no: See above

Date of manufacture : See above

Validity period : 24 months

Storage: Store in a dry, cool and well-ventilated place. Storage temperature 5°C - 25°C.

Attention: Read the accompanying instructions before use.

Manufacturer : Norofert SA

Street Lt. AV. Șerban Petrescu, No. 20, District 1,

Bucharest Romania

Phone: 0766 080 767

For your attention:

Shake your container vigorously for 15-20 seconds for good homogenization. By observing the indications presented, the product can be used for its intended purpose. The manufacturer declines any responsibility for damages due to storage, handling or use not in accordance with the recommendations on this label.

Action mode:

Neem oil (Margosa extract) is a natural extract from the seeds of an *Azadiractha indica* tree. It controls the ability of insects to grow and reproduce by killing insect larvae or nymphs before they become reproductively capable adults and interferes with the insect's molting hormone. It also reduces damage by repelling and deterring feeding at all insect stages. The compound causes insects to reduce or stop feeding, can prevent larval maturation, reduce or interrupt mating behavior, and in some cases the oil coats the insect's breathing holes and kills them. Orange oil destroys the protective layers of the dehydrating insects, which leads to their destruction and death. It penetrates the breathing holes of the insects, leading to their suffocation and death. Paraffin oil has a physical mode of action: the oil film covers and suffocates insect eggs and larvae and adults.

Fights very well aphids, lice, whiteflies, mites (it also has a repellent effect on them), moths, thrips, phylloxera, psyllids, etc.

Application: can be applied to all types of plants.

Application time:

Application should be made when the pests first appear and are in their larval or early nymph stages.

Application technique:

It is applied directly on the leaves throughout the vegetation period, the interval between treatments 12-14 days.

CAREFUL! YOU DO NOT HAVE TO DO A PLANT BATH! The product must be sprayed from a distance of 20 cm, enough for the particles to reach the surface of the leaves. The product can also be applied against pot worms as follows: when the worms are very small (2-3 mm) it is sprayed over the entire surface of the soil in the pot, and when the worms have reached large sizes (2-3 cm) it is applied directly on the worm (bath). Do not exceed the recommended frequency! Shake the bottle before spraying.

Hygiene measures and labor protect:

To avoid contact with the skin, the eyes and the clothing. Use protective clothing individual. You wear protective gloves, protective clothing. Do not eat, do not drink and don't smoke in the time the use. Hands and / or face must to be washed before breaks and at the end work schedule. Keep out of reach children and other people unauthorized.

First aid measures:

Remove immediate all clothing contaminated. Keep the product container, the label or sheet with security data, in case you consult a doctor .

- after inhalation: rest, fresh air, medical care.

- After skin contact: Wash immediately with plenty of soap and water. If the irritation persists, a doctor will be called.
- after eye contact: wash the affected eyes with the eyelids open for at least 15 minutes under the current of water.
- after ingestion: no vomiting will be induced. It will rinse your mouth very well. A doctor will be notified immediately.

Environmental protection measures :

Do not unload on the ground/in the basement. Do not drain into drainage channels/surface waters/groundwater. Prevent the product from reaching surface waters by any measure.

Storage and transport conditions :

Store in a dry, cool and well-ventilated place. It will be protected from direct sun exposure and will protect from frost. Keep container tightly closed. Storage temperature 5°C - 25°C.

Validity period : Two years from the date of manufacture.

For your attention : By observing the indications presented, the product can be used for its intended purpose. The manufacturer declines any responsibility for damages due to storage, handling or use not in accordance with the recommendations on this label.
